

Solução 1

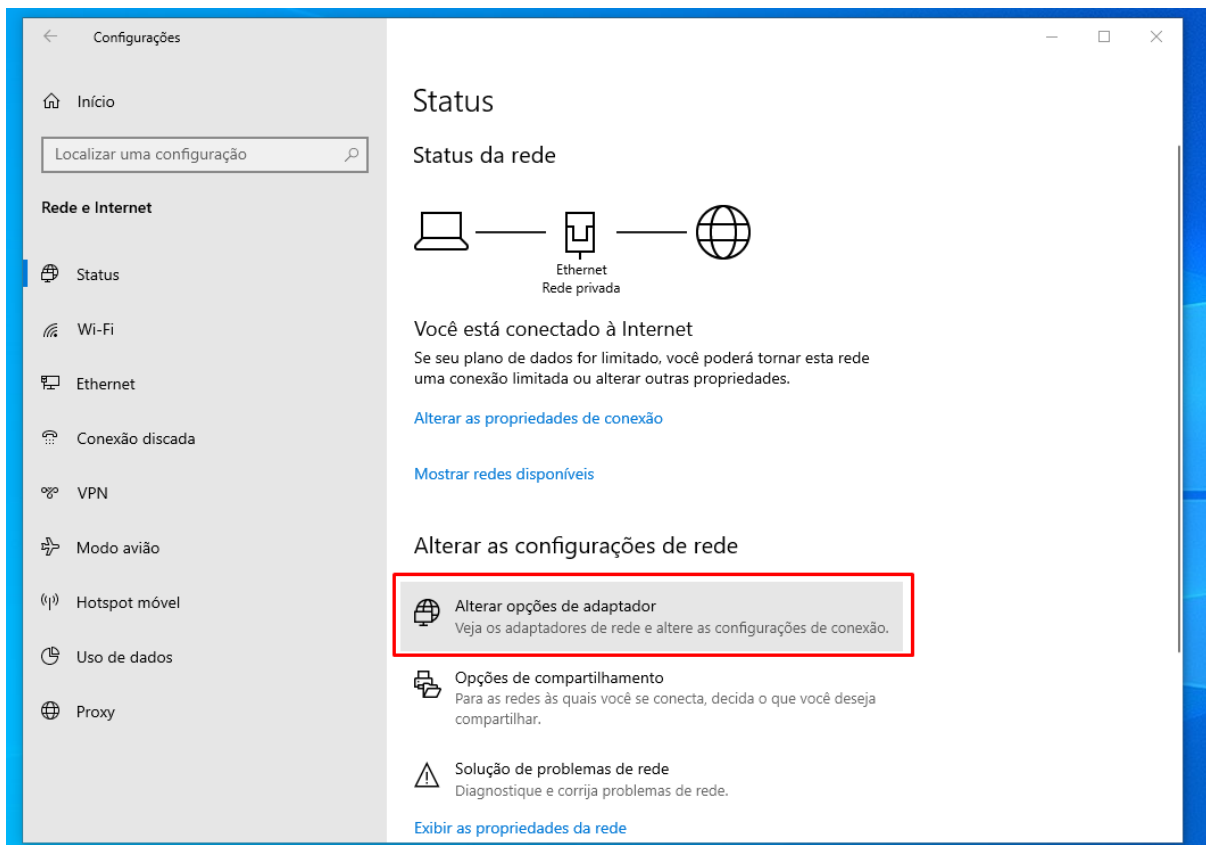

Reiniciar o modem de internet

Solução 2

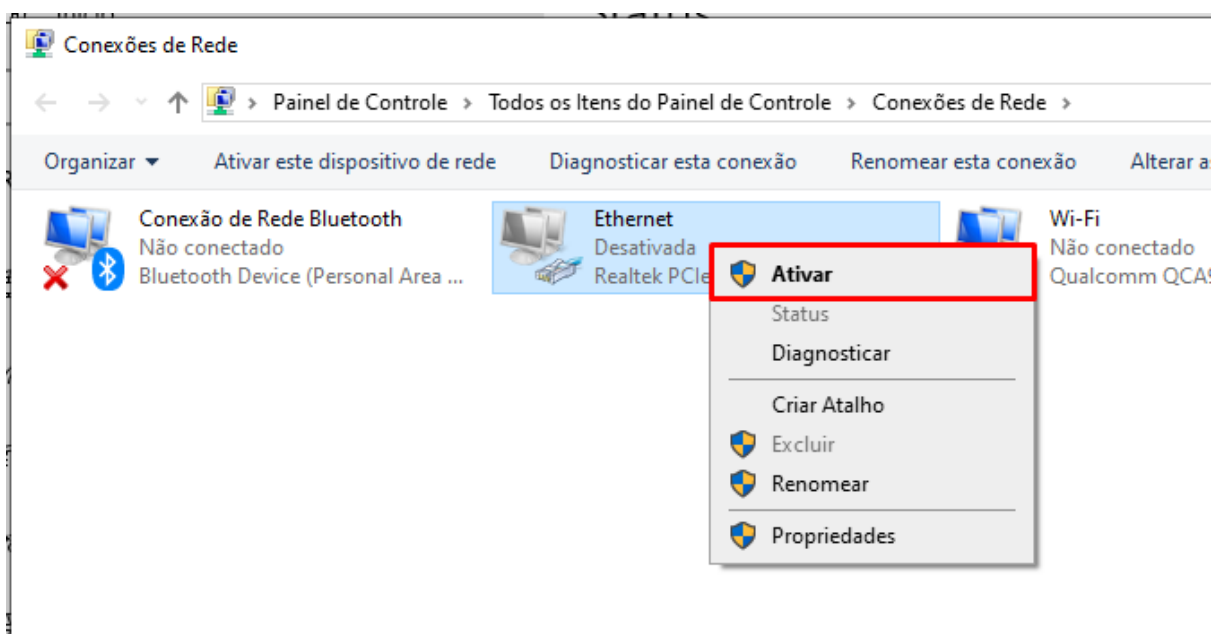

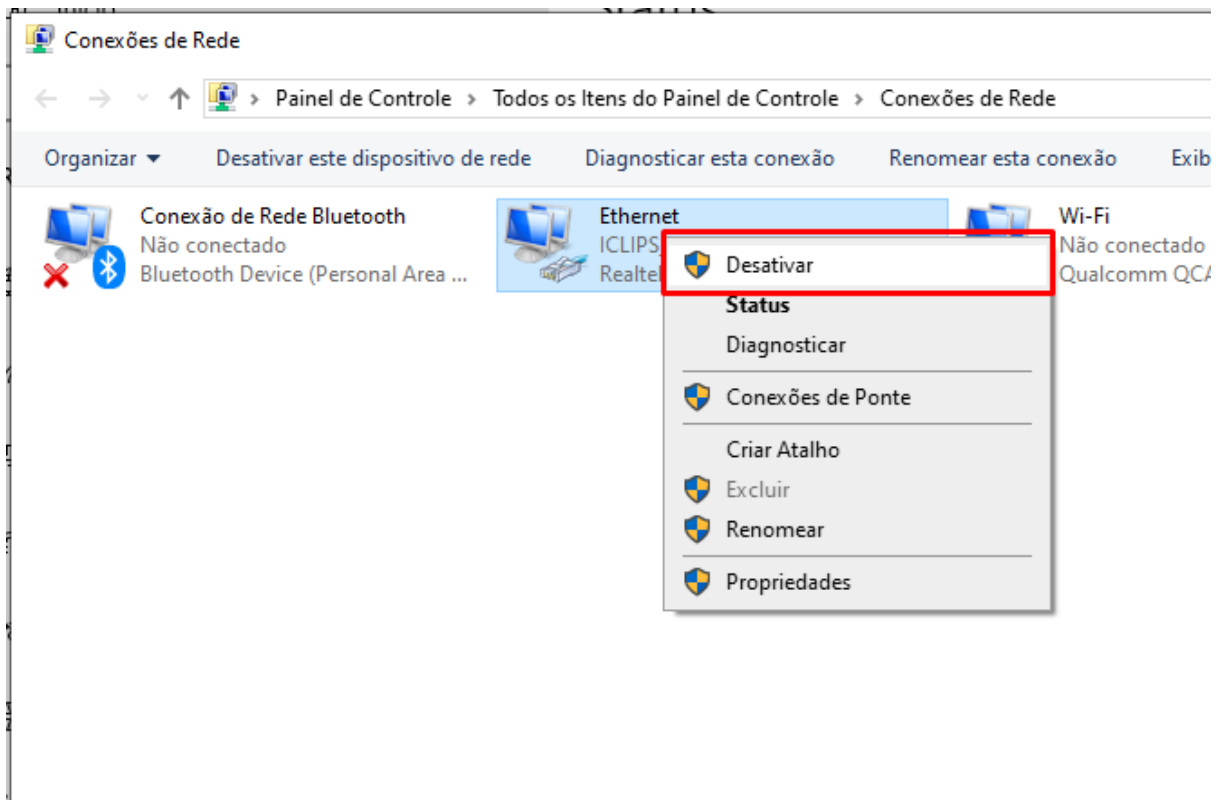

1- botão direito no ícone da internet -> abrir configurações de rede e internet

2- clicar em alterar opções de adaptador

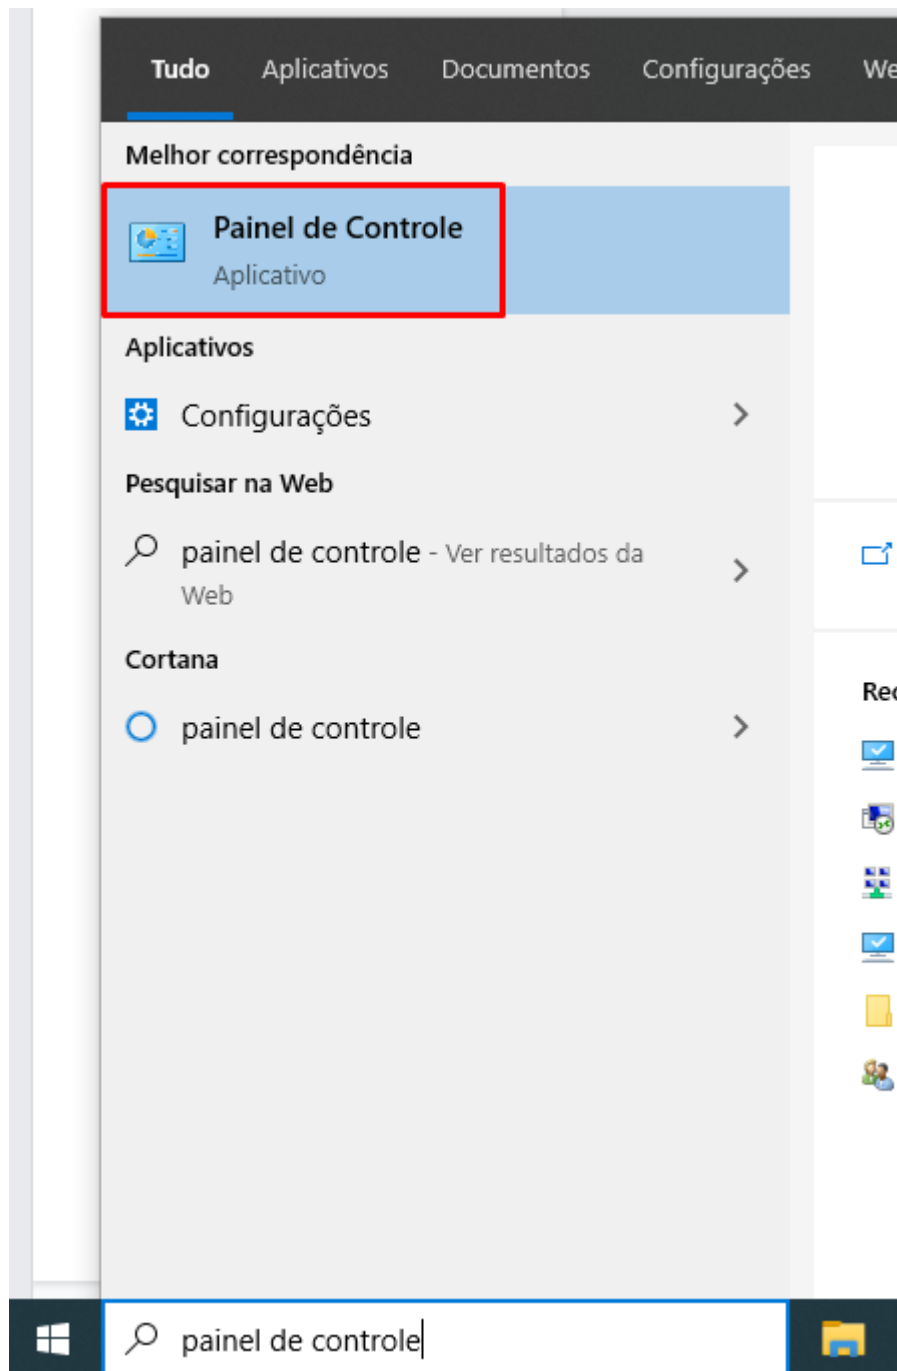

3- botão direito no ícone com Ethernet > Desativar > Ativar

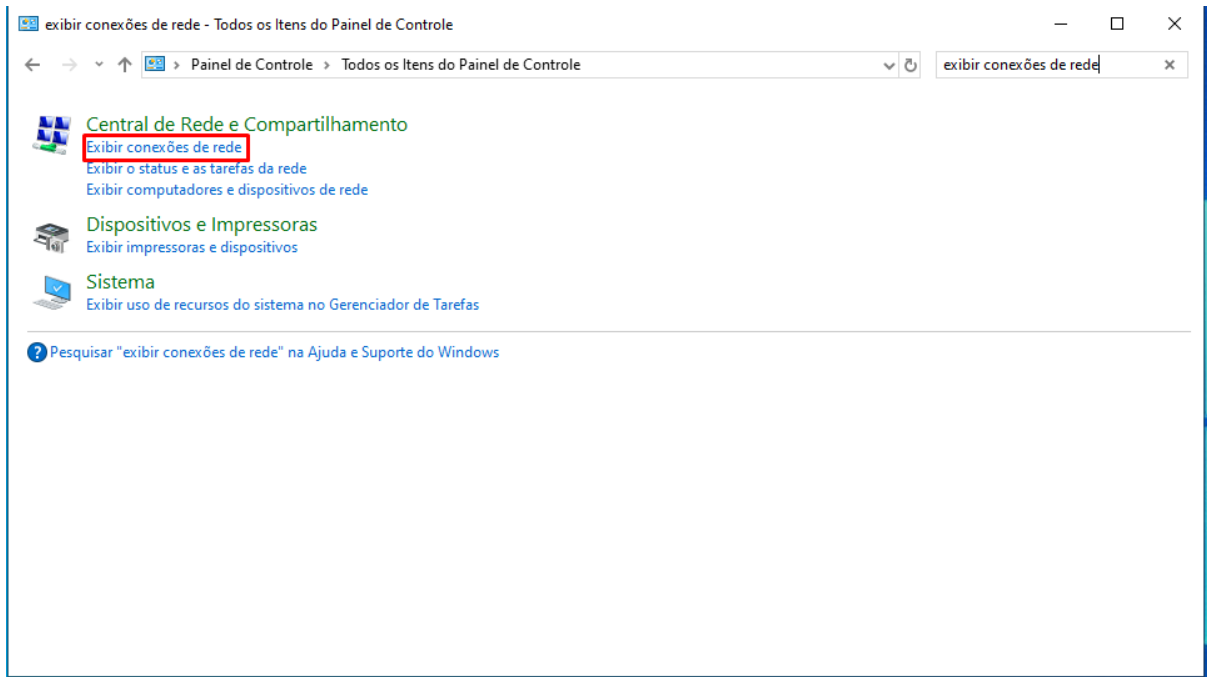

Solução 3

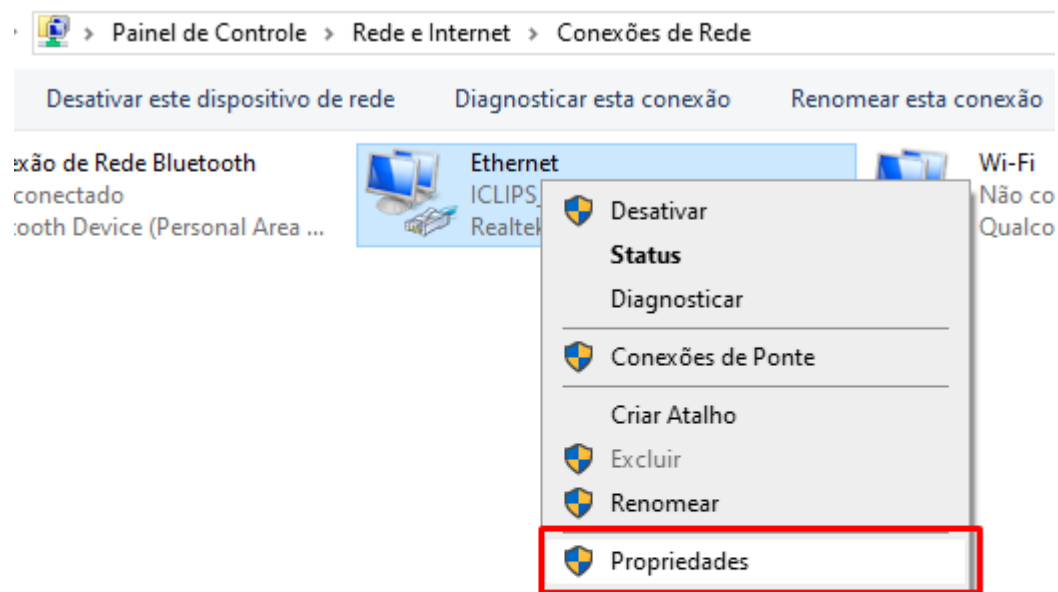

1- Acesse o painel de controle

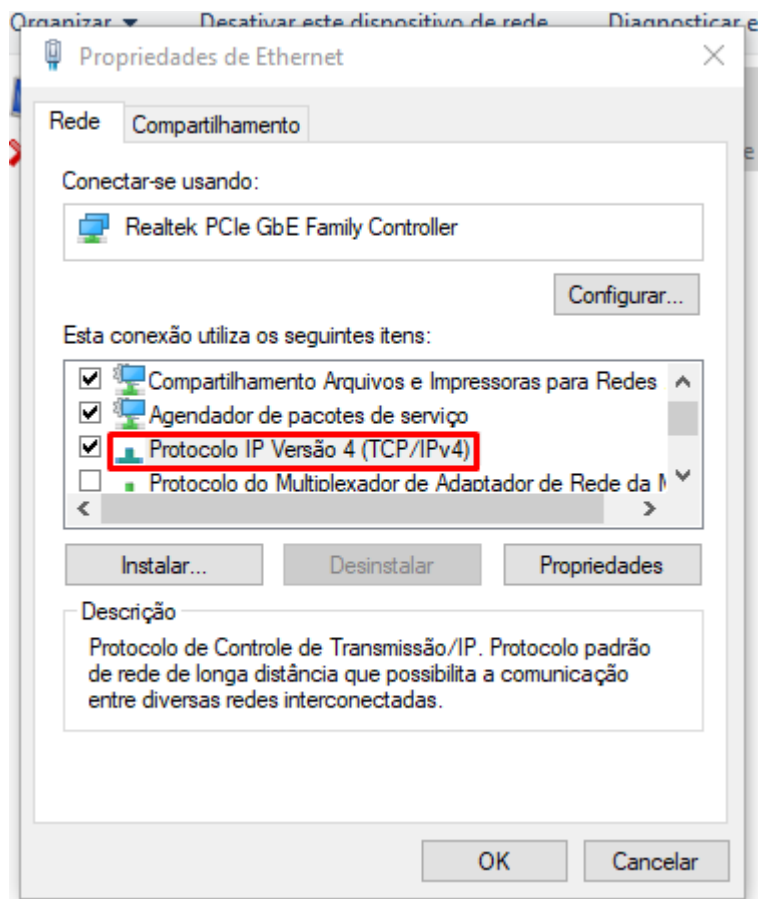

2- Acessar exibir conexões de rede

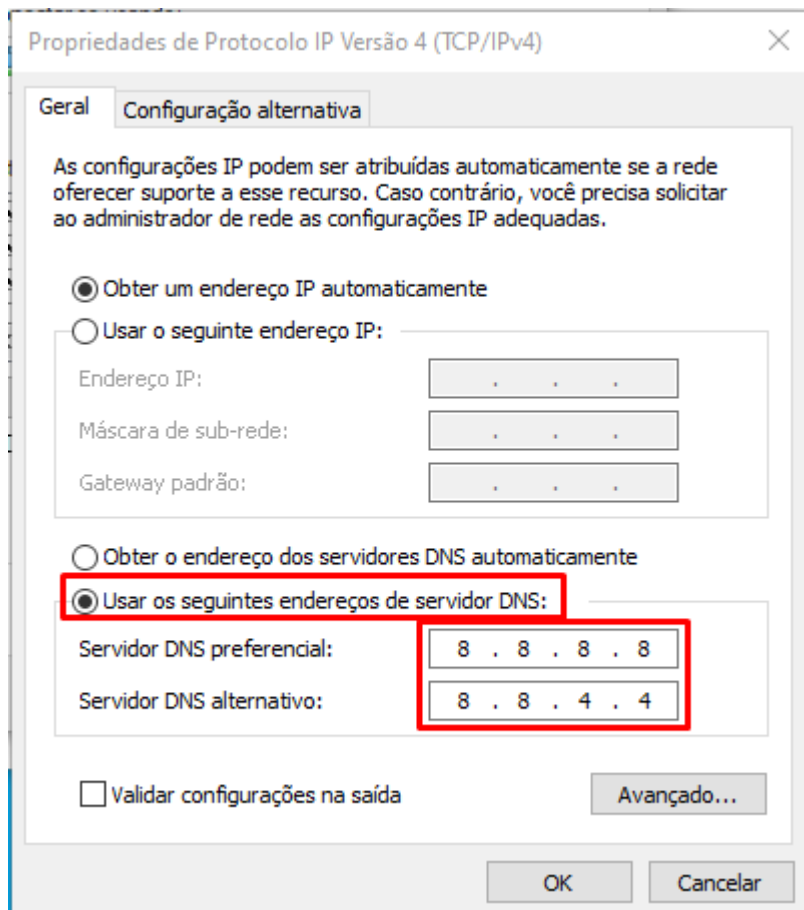

3- botão direito na internet -> propriedades

4- Duplo clique em protocolo ip versão 4 (tcp/ipv4)

5 - Marcar usar os seguintes endereços de servidor DNS e preencher com o DNS do Google (8 8 8 8 8 4 4)

Para voltar ao normal, é só marcar obter o endereço dos servidores DNS automaticamente
